

WORKERS IN THE TAXI INDUSTRY

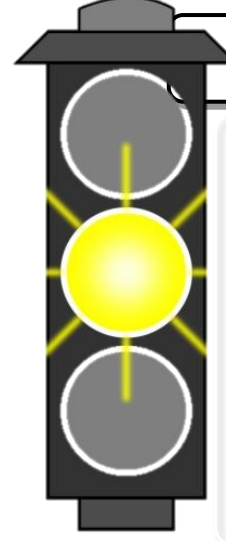

HOW TO STAY SAFE

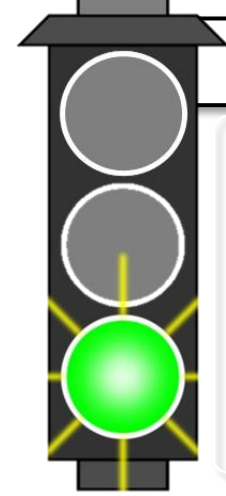

TAXI DRIVERS – ensure that:

- 
-  You use a facial mask to protect yourself from airborne germs
 -  Every passenger boarding the vehicle has a properly worn facial mask, to protect you and themselves
 -  Use a hand sanitiser in between and after contact with money, passengers and colleagues
 -  Passengers disinfect their hands before boarding the vehicle (use a hand sanitiser before boarding)
 -  Ensure there is adequate air movement within the taxi- windows open to allow air movement across the taxi
 -  Are you are vaccinated against COVID-19? If not, go to sacoronavirus.co.za to find your nearest vaccination centre

MARSHALLS – ensure that:

- 
-  Taxis are cleaned in between passengers, using approved cleaning products and disinfectants, especially the passenger seats, where money is kept and the taxi handles
 -  Provision of accessible hand sanitiser (with at least 70% alcohol) for use by drivers and passengers at any stage.
 -  Are you are vaccinated against COVID-19 to ensure reduction of the spread of infection?

TAXI OWNER & RANK COMMITTEES – ensure that:

- 
-  COVID-19 infection and vaccination information is provided to drivers and passengers
 -  Hand-cough and sneeze hygiene is emphasized
 -  Taxis must be sanitised after every trip with 70% alcohol disinfectant or soap

As a driver, **if you are sick**, arrange with your employer to test and stay at home once confirmed that you have COVID-19.

If you're not sick, but have a **laboratory-confirmed COVID-19 positive contact person**, there is no need to quarantine but monitor for symptoms.
